S17 - S20	3/8-16	360
S24	7/16-14	580
S26 - S30	1/2-13	890

## INSTALLATION PROCEDURES

1. Verify all components listed above are available and are the correct size for the reducer to be mounted.
2. Be sure all surfaces, tools and hands are clean and free of ferrous particulate. Ferrous particles can cause rust to occur on the surface of the stainless steel.
3. Install the two base feet to the bottom surface of the reducer using 4 of the socket head cap screws. Apply a small amount of thread locking compound to each fastener prior to installation. Tighten the stainless steel fasteners per the torque table above.

4. Install the reducer in its operating location using the other 4 socket head cap screws. Apply a small amount of thread locking compound to each fastener prior to installation. Tighten the stainless steel fasteners per the torque table above.
5. Install the socket head cap screw covers to prevent water from collecting in the cap screw pockets. A food grade RTV sealant may also be used to fill and seal these cavities if desired.
